Prisrčno vabljeni na

Dvodnevni seminar o sodelovanju človeka in umetne inteligence

z naslovom

Umetna inteligenca za filozofijo in humanistiko: orodje, agent ali oboje?

Seminar bo v angleščini in bo potekal v **Modri sobi**
v sredo, **5. novembra, od 13.00 do 17.00** ter
v četrtek, **6. novembra, od 10.30 do 12.30.**
Vodil ga bo profesor **Josef van Genabith**
iz Nemškega raziskovalnega centra za umetno inteligenco
Univerze Saarland.

Kratek povzetek seminarja v angleščini:
AI for Philosophy and the Humanities:
A Tool, an Agent or Both?

Modern AI, i.e. artificial neural networks (ANNs) and large language models (LLMs), impacts all walks of live. Our sessions target philosophers and generally researchers and students in the Humanities who may not (yet) have a background in Digital Humanities or modern AI, but who are thinking about how AI may be used in and impact on their research. AI can be awe-inspiring, scary, infuriating, threatening, seem like a miracle, a cheat, and often all at the same time. To be able to use modern AI in a critical and informed way, the first step is to gain a basic understanding of how AI works, at least at an intuitive level. This is the goal of our course: we will look at the foundations of how modern AI, in a way that makes it accessible to colleagues and students in philosophy and the humanities. This basic understanding (and with it perhaps demystification) will provide a ground for a critical and informed Human-AI collaboration and co-creation in Philosophy and the Humanities. Our course will focus on neural networks and large language models. It will be slow paced and highly interactive.

Seminar je organiziran v sklopu metodološke priprave na ERC Synergy projekt »Sodelovanje človeka in umetne inteligence pri preučevanju recepcije Kanta na Kitajskem«
